

## ATG-300 Series Power Signal Generator

It can output sine wave, square wave, triangle wave,

and pulse wave

The input signal can be built-in or external

Maximum output power 810Wp

Bandwidth (-3dB) DC~30kHz

## Introduction

The ATG-300 Series is an ideal power signal generator that outputs sine waves, square waves, triangle waves, and pulse waves. Customers can choose internal or external input signal based on the usage. With a maximum output of 810Wp, it can drive power-type loads.

## Input

The input interfaces of ATG-300 series are BNC interfaces. When in FWG mode, the built-in input signal will be used, just need to set up the waveform, frequency, voltage and other parameters. When in AMP mode, the signal is externally connected, the input resistance is  $5k\Omega$ , the output resistance can be switched, and the voltage gain can be adjusted to achieve signal amplification.

## LCD panel display

LCD display of equipment status, parameter settings etc., simple and easy to understand.

## Output

The output ports of the ATG-300 series are banana sockets, and the output resistance is switchable.
