

Machinery Switchgear Tester

MST-204

The MST-204 Machinery Switchgear Tester is a measurement instrument designed for testing the effectiveness of protective measures in machines, low-voltage switchgear, and controlgear assemblies. Using the High-Voltage Adapter (HVA-204) expands the functionality of the main unit with HV AC capabilities. The Three-Phase Adapter (TPA-204) enables users to test welding equipment, portable appliances, mains cord extensions, PRCDs, EV charging cables, and more. The advanced AUTO-TEST function allows users to quickly and easily execute predefined test sequences or customer-created test plans. The built-in large memory can store measured results, which can later be transferred to PC software for creating test reports.

- Easy operation with using automatic parameter and limit control. Test limits and values are automatically set based on user input for measurement standards and Device Under Test (DUT) parameters
- The Advanced AUTO-TEST mode facilitates the easy and transparent preparation of test sequences, including instruction, test point definition, and organizational features
- A built-in HELP menu for each measurement assists the user in connecting the Device Under Test (DUT)
- The Commander remote control allows full control of the instrument from a distance
- Separated HVA-204 allows simpler usage of the MST-204 without HV AC functionality and deliveres more pocket friendly solution.
- Fully compatible with "SW-MST-204" PC software to create test reports

Machinery <u>Sw</u>itchgear SPEKTER
